Flow of talk

- Bitcoin
- Ethereum
- ICOs
- Policies
- Speakers
- Summary

고령사회, 소득양극화, 경제위기

Economy, Currency, Government

- People want an *ever improving state of self* and economic position compared to what they have enjoyed in previous years.
- **Gov. needs to provide** what people want.
 - Food and house
 - Energy and water
 - Safer environment
 - Less work but improved life style with leisure
 - Equal opportunity for limited resources
 - Improved education for children

Financial Crisis, FED and LSAPs

> [Financial Panic 07 ~ 08](#)

> Housing bubble popped!

> Fed began lowering interest rate.

> [Housing and Economic Recovery Act of 2008](#)

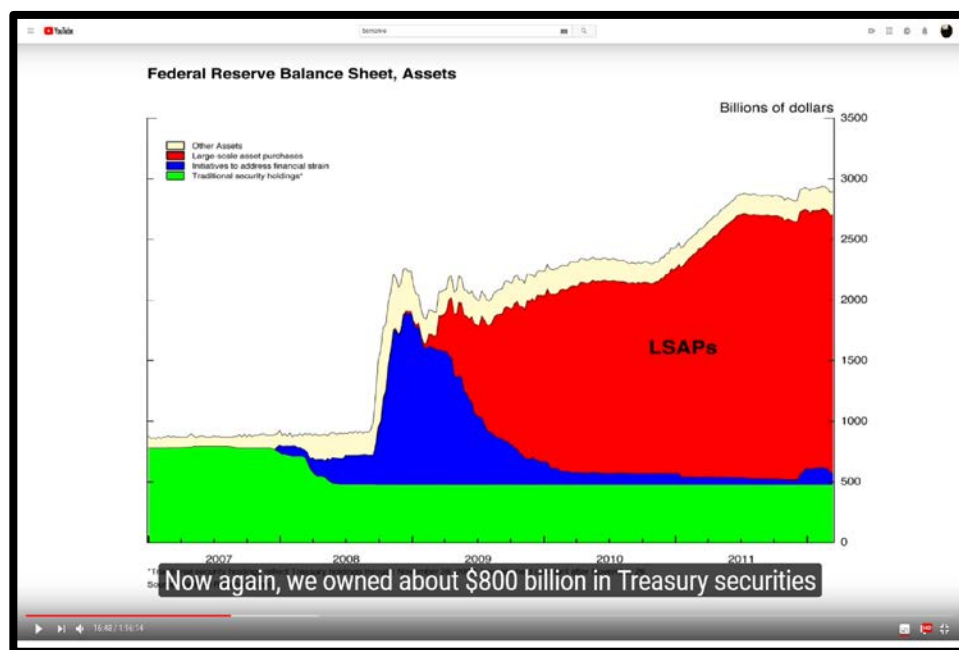

> Bankruptcy of Lehman Brothers

> Too Big to Fail Problem

>> Fed saves AIG, Goldman Sachs,
Morgan Stanley

> Large Scale Asset Purchases (QE)

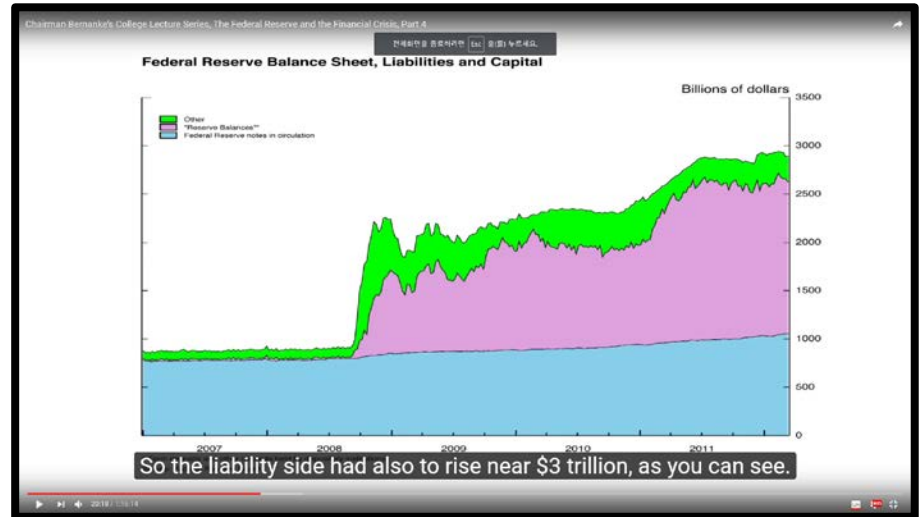

- Control long-term supplies of securities
- Raising the price of these assets
- Lowering the long term interest rate.

How did they pay for LSAPs?

the liability side had also to rise near \$3 trillion... But as a literal fact, **the Fed is not printing money to acquire these securities**. The amount of currency in circulation has not been affected by these activities. What has been affected is the purple area. Those are the accounts that banks, commercial bank, holds with the FED. They are part of what's called the monetary base. But again, they are not – they certainly aren't cash.

Watch for yourself right here.

Reforming Wall Street

Wall Street cannot continue to be an island unto itself, **gambling trillions in risky financial decisions** while expecting the public to bail it out.

It is time to break up the largest financial institutions in the country.

The **six largest financial institutions** in this country today hold assets equal to about 60% of the nation's gross domestic product. These six banks issue more than two thirds of all credit cards and over 35% of all mortgages. **They control 95% of all derivatives and hold more than 40% of all bank deposits in the United States.** We must break up too-big-to-fail financial institutions. Those institutions received a **\$700 billion bailout** from the US taxpayer, and more than **\$16 trillion in virtually zero interest loans** from the Federal Reserve. Despite that, financial institutions made over \$152 billion in profit in 2014 – the most profitable year on record, and three of the four largest financial institutions are 80% bigger today than they were before we bailed them out. Our banking system must be part of the productive, job-creating economy. The Federal Reserve, a government entity which serves as the engine of the banking industry, must eliminate its internal conflicts of interest, provide stricter oversight, and **insist that the banks serve the economy in a way that works for everyone, not just a few.**

The Evolution of Trust

Scientific American 318, 38 - 41 (2018)

Natalie Smolenski

- Banks and governments have in many ways failed to broker trust for the global economy, especially in the past few decades. Ordinary people have grown wary of centralized power and are seeking alternatives.
- Bitcoin—and blockchain technology in general—allows the brokering of trust to be shifted toward machines and away from human intermediaries such as bankers. This technology could design exploitation out of the system instead of punishing it later.
- Blockchains lend themselves both to human emancipation and to an unprecedented degree of surveillance and control. How they end up being used depends on how the software handles digital identity.

I am the 1%. Let's talk.

- Con:
 - FED, TARP, LSAPs.
 - Gov. deficit spending
 - Socialism
 - Regulations
- Pro:
 - Small government
 - Free market capitalism
 - Entrepreneurship
 - Making money means creating jobs with new goods and services.
- His paying 50% of his income to tax.
- If he did not pay the tax, he could have re-invested and made more jobs.

At the birth of Bitcoin, there were many issues which made us to think!

- Today, currency is not money.
 - USD does not have any internal value (No more gold standard).
 - Currency is created by banks when someone takes out a loan or government issues bonds (I.O.U.) to banks, or by **increasing an electronic balance** to the commercial banks **at the whim of FED**.
- With frequent financial crises, trust to gov. has been greatly tarnished.
 - People are grown wary of budget deficit and currency expansion.
- Issues around bitcoin are
 - Decentralization
 - Reforming Wall Street
 - Unbundling big corporations
 - Reducing inequality

Birth of Bitcoin

Trust enabled by peers

Bitcoin: A Peer-to-Peer Electronic Cash System

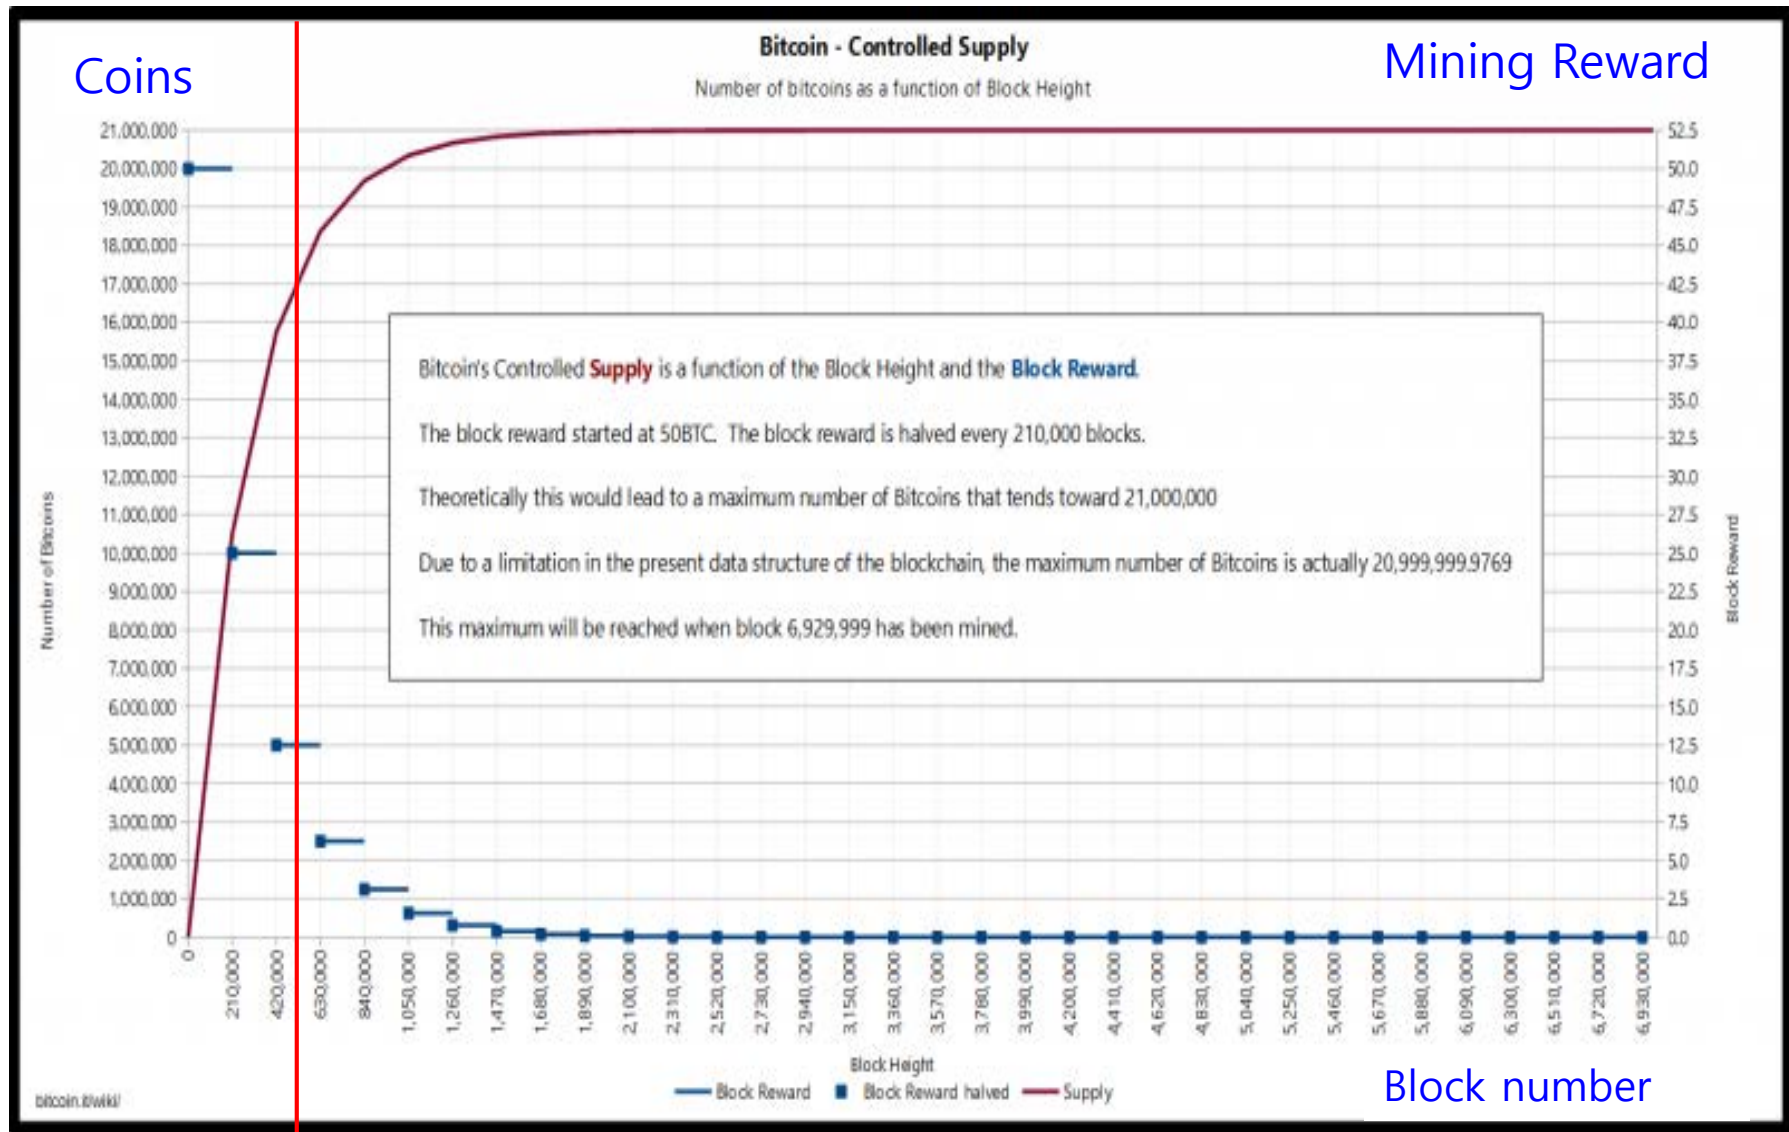

Satoshi Nakamoto
satoshin@gmx.com
www.bitcoin.org

Abstract. A purely peer-to-peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution. Digital signatures provide part of the solution, but the main benefits are lost if a trusted third party is still required to prevent double-spending. We propose a solution to the double-spending problem using a peer-to-peer network. The network timestamps transactions by hashing them into an ongoing chain of hash-based proof-of-work, forming a record that cannot be changed without redoing the proof-of-work. The longest chain not only serves as proof of the sequence of events witnessed, but proof that it came from the largest pool of CPU power. As long as a majority of CPU power is controlled by nodes that are not cooperating to attack the network, they'll generate the longest chain and outpace attackers. The network itself requires minimal structure. Messages are broadcast on a best effort basis, and nodes can leave and rejoin the network at will, accepting the longest proof-of-work chain as proof of what happened while they were gone.

Bitcoin

- Since birth in 2009, bitcoin has never been stopped breathing and is alive currency system.
- It is a global digital currency which works beyond national boundaries.
- It was born when trust on the banks and governments was severely degraded.
- It mints bitcoins every 10 min.

Bitcoin' Minting Schedule

How does Bitcoin work?

Bitcoin uses the internet.

Bitcoin attracts P2P nodes.

P2P nodes share a blockchain.

- Blockchain is to mean a digital ledger:
 - Blockchain is a chain of blocks.
 - Each block is time stamped.
 - Each block stores TXs.
- Blockchain also implies the technology itself.

The blockchain is left open for viewing.

- The digital ledger is left open.
- Anyone can talk to a node and view the ledger. (Public Blockchain)

These ledgers are the same except the most recent blocks.

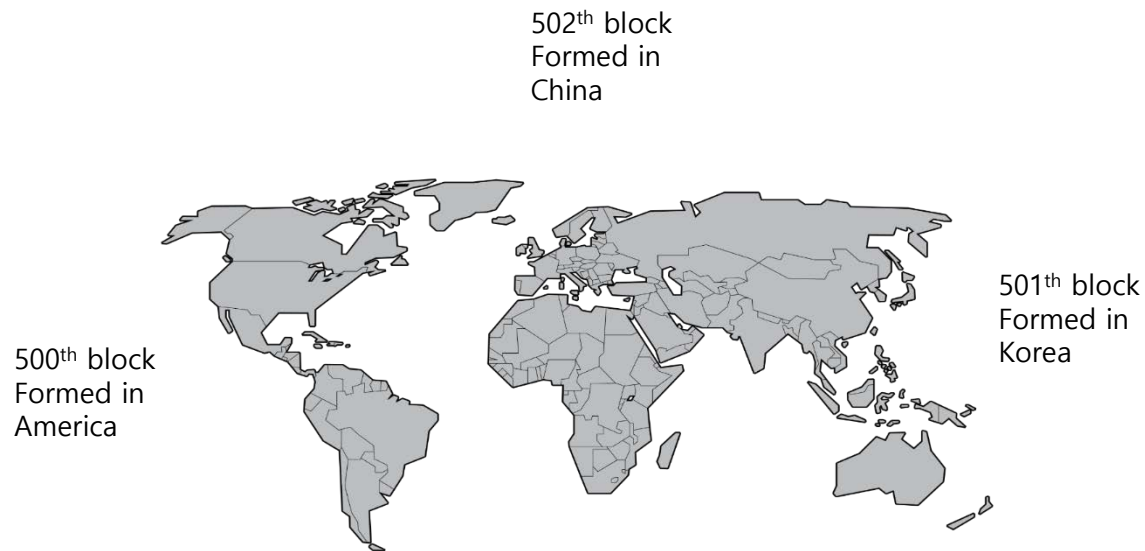

Any new node can join.

- In the public blockchain network, anyone can join and become a guard (miner).

Miners are everywhere.

- Each block is formed by a node.
- A node gathers TXs, validates them, forms a block.
- As a reward, **the node which formed a block** is given a **block mining reward** (e.g. 12.5 BTC).
- Thus, they are called **miners**.

Consensus mechanism plays the key role in blockchain.

- Multiple different chains are possible, as miners work independently.
- When any two chains are available, miners choose the longer one!

Which one wins when there are two chains announced?

Blocks are cryptographically chained.

- Blocks are cryptographically chained.
- Any alteration made to the content can be easily noticed.

Content in the blockchain cannot be changed (easily).

- What happens when any alteration is made?
- Any alteration is easily noticeable!
- If an unnoticeable change were wanted, the whole alteration would be needed.
- The whole alteration is to redo all the hashes of the subsequent blocks.
- Proof-of-Work (PoW) is imposed to the chain and thus the whole job cannot be redone easily.
- Immutability and openness allow one to transact with the other over the internet.
 - A → B 2 BTC
 - B → C 1 BTC
 - C → D .5BTC

Blockchain is a Program Suite.

블록체인 구성 요소 3가지

1. Networking of P2P nodes over the web interface

- Node registration, get-address, give-address
- Full node or light node
- Communication among the wallets and the miners

2. Wallet app for TX generations

- Make private and public keys, address, store UTXOs, make TX, put signature, announce it to the neighbor, check to see if the TX is supported by the blockchain.

3. Blockchain Protocol

- **Data**: Genesis block + regular blocks, one block every 10 min, block-size 1Mbyte
- **Protocol**: consensus, block header, difficulty level adjustment, ...
- **Mining**: Get the longest chain, **validate** it and all transactions within it, get transactions from mempool and form a block, **run SHA repeatedly until you hit a good hash**, put the proof into the block header, and attach the proofed block to the longest chain, and make announcement ASAP.

Program Suite

- C++, Python, Go, Java, Flask, http
- Download and run, then you have a blockchain server.

Anybody who downloads and runs the blockchain suite can become the member of
the blockchain internet

Bitcoin Blockchain Verticals

- Decentralized
- Public
- Immutability
- Trust
- Minting coins
- Anonymity

WEF's Perspective on Cryptocurrency

- 1980 PC Windows
- 1995 Internet, Explorer
- 2005 Mobile, Android iOS
- 2009 ~ : Internet of Values!!!

- May 2015 WEF Reports,
 - "By 2023, a nation will appear, collecting tax in cryptocurrencies"
 - "By 2027, 10% of World GDP will be stored in cryptocurrency"

- Cryptocurrencies Market Cap 2018 = 216B USD (0.25% of WGDP)

ICO and Ethereum

ICO

- Startups in the blockchain world use **Initial Coin Offering** (ICO) as a tool **to raise funds**.
- Reference: <https://icowatchlist.com/education/history-and-evolution-of-icos>

ICO, how did it get started?

- “We claim that the existing bitcoin network can be used as a protocol layer, on top of which **new currency layers with new rules can be built** ...
- ... **initial funds to hire developers to build software** which implements the new protocol layers, and ... **will richly reward early adopters** of the new protocol.”
- **Mastercoin** raised close to **5,000 bitcoins** or **\$500,000** 2013.
- <https://www.forbes.com/sites/laurashin/2017/09/21/heres-the-man-who-created-icos-and-this-is-the-new-token-hes-backing/#36db35661183>

J.R. Willett, the founder of the ICO
COURTESY OF J.R. WILLETT

Ethereum ICO

- Ethereum ICO in 2014, raising coins worth **millions of dollars**.

Ethereum

- It allows full computer codes in blockchain.
- Blockchain is platformized **so that anyone can use.**
- Smart contracts and tokens can be generated easily.
- Decentralized applications (Dapp) are proliferated.

Bitcoin only
records coin TXs

Ethereum allows
data and codes as well

The Ethereum's block that stored the Panmunjeom Declaration

Smart Contracts

- Without lawyers, insurers, administrators, one can expect to open up a nice business relation with anyone in the internet.
- Computer codes -- smart contracts -- can be used to make contracts and expect **auto execution of contractual terms**.
- Programming for SCs is relatively easy.
- Thousands of ICOs have been made.

Legal Contracts vs. Smart Contracts

- Sharing Economy
- Insurance
- Voting
- MediChain
- Real Estate
- Law

Lex Cryptographia

In this Article, we explore the benefits and drawbacks of this emerging decentralized technology and argue that its widespread deployment will lead to expansion of a new subset of law, which we term Lex Cryptographia: rules administered through self-executing smart contracts and decentralized (autonomous) organizations. As blockchain technology becomes widely adopted, centralized authorities, such as governmental agencies and large multinational corporations, could lose the ability to control and shape the activities of disparate people through existing means. As a result, there will be an increasing need to focus on how to regulate blockchain technology and how to shape the creation and deployment of these emerging decentralized organizations in ways that have yet to be explored under current legal theory.

암호화폐/블록체인 질문목록

1. 블록체인이란 게 도대체 뭔가요?
2. 세계 최초의 암호화폐는 무엇인가요?
3. 암호화폐와 블록체인의 관계는 어떻게 되나요?
4. 암호화폐와 우리가 평상시 쓰는 통화와의 차이점은 무엇인가요?
5. 암호화폐는 어떤 배경에서 탄생하게 되었나요?
6. 탄생한지 9년 된 암호화폐와 블록체인은 현재 어떤 상태입니까? 전세계적인 암호화폐 개발 동향을 알려 주십시오.
7. Ethereum이라는 암호화폐의 특징은 어떤 것인가요?
8. Smart Contract라는 것은 어떤 것 인가요?
9. 블록체인이 쓰일 수 있는 분야가 매우 많다고 하는데 예를 좀 들어 주시겠습니까?
10. Smart Contract의 응용분야는 어떤 것들이 있나요?

암호화폐/블록체인 질문목록

11. 전세계 젊은이들이 블록체인의 가능성에 집중하고 있다는데, 그이유는 무엇 인가요?
12. 블록체인은 과연 미래 기술인가요? 미래 기술이라고 한다면 어떤 이유를 들 수 있을까요?
13. 4차 산업혁명과 블록체인은 어떤 관계가 있나요?
14. 대한민국의 블록체인 산업의 현재 상태는 어떤 것입니까?
15. Initial Coin Offering이 대한민국에서 금지된 상태인데, ICO가 무엇이고, 금지된 배경은 무엇입니까?
16. 대한민국 정부가 블록체인 및 암호화폐를 규제하고 있는데, 정부의 입장은 무엇이라고 생각합니까?
17. 인공지능과 블록체인이 미래 핵심기술이라는데, 그 이유는 무엇이라고 생각하시는가요?
18. 대한민국이 블록체인을 육성 발전시켜야 할 방향은 어떤 것이라고 생각합니까?
19. 블록체인으로 젊은이들이 창업을 하려고 하면 어떤 것들을 조심해야 할 까요?
